

Vaccination of people of high risk of infection in prisons, military camps and homeless centers

Do COVID-19 vaccines contain a microchip or any kind of tracking technology?

I am a healthy young person. Why should I get a COVID 19 vaccine?

Even healthy, young people should get vaccinated. As more and more people are vaccinated, the virus will have fewer people to infect, and community transmission will go down. Every person that gets vaccinated brings us one step closer to ending the pandemic.

COVID-19 vaccines have nothing to do with any individual tracking of any kind; their sole purpose is to prevent the spread of COVID-19 and reduce hospital stays and deaths due to the virus.

**Get vaccinated.
Protect Yourself,
Your Family, and
Your Community.**

Poor hygiene, poverty and poor access to clean water and sanitation are risk factors for communicable diseases transmission.

Living in conditions of overcrowding is associated with risk of infectious diseases

I am lucky to have a place to stay. Why communicable diseases are something to worry about?

Homeless Centers may act as sources of infection, amplification and spread of infectious diseases within and beyond them, due to the close proximity in their settings.
