

## Why is it important to get vaccinated?

Vaccines are life's best allies. Being up to date with them protects your family from more than 10 serious diseases such as: polio, measles, whooping cough, rubella, hepatitis B, diphtheria, tetanus, mumps, meningitis, tuberculosis, pneumococcus, flu... And now COVID-19!

There are those who believe that not vaccinating their children does not affect us

And the truth is...

...that not vaccinating affects us all!

## OLDER PERSONS AND VACCINATION

Vaccines help fight diseases, making it possible to control, eliminate and even eradicate them.

Vaccination prevents complications in people with chronic health conditions: cardiovascular disease, diabetes or chronic lung disease.

Get vaccinated!
